DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 1. Claims 1-9 are rejected under 35 U.S.C. 102(b) as being anticipated by De Mathaeis US 2002/0034448. The reference discloses a fuel supply device comprising a pump 20 which supplies a supply fuel under pressure and a fuel pressure control valve 31 which is provided on a fuel outlet side of the pump for controlling a fuel supply pressure from the pump to a predetermined pressure, wherein the fuel supply device further includes a fuel takeout valve 23 which has a valve opening pressure smaller than a valve opening pressure of the fuel pressure control valve for obtaining fuel for lubrication on the fuel outlet side, and a back pressure of a valve piston of at least the fuel pressure control valve is maintained at a fuel-low-pressure-side pressure of the pump. See Figures 1 and 2. Lubrication is supplied via conduits 13. Note piston 37 and ports 44.

3. Claims 1-9 are rejected under 35 U.S.C. 102(e) as being anticipated by Breeden US 6755625. The reference discloses a fuel supply device comprising a pump which supplies a supply fuel under pressure and a fuel pressure control valve which is provided on a fuel outlet side of the pump for controlling a fuel supply pressure from the pump to a predetermined pressure, wherein the fuel supply device further includes a fuel takeout valve which has a valve opening pressure smaller than a valve opening pressure of the fuel pressure control valve for obtaining fuel for lubrication on the fuel outlet side, and a back pressure of a valve piston of at least the fuel pressure control valve is maintained at a fuel-low-pressure-side pressure of the pump.

4.

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. See the cited documents showing fuel pumps having control valves with similar features to Applicant's device, i.e. fuel pumps have control valves with lubrication ports.

6.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Thomas N. Moulis whose telephone number is 571 272 4852. The examiner can normally be reached on M-Th.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Stephen K. Cronin can be reached on 571 272-4536. The fax phone
